Professional Summary

Software Engineer with a PGCP in Big Data Analytics (C-DAC Mumbai) and a B.E. in IT. Specialized in architecting distributed backend microservices, high-throughput data pipelines, and LLM orchestration layer implementations (RAG). Proficient in FastAPI, asynchronous processing, vector indexing, schema design, containerization (Docker), and Big Data processing frameworks (Spark, Kafka, Hadoop, Airflow).

Education

Centre for Development of Advanced Computing (C-DAC), Mumbai	2026–Present
PGCP in Big Data Analytics (PGCP-BDA)	
Ram Meghe College of Engineering and Management, Amravati	2021–2025
Bachelor of Engineering (Information Technology)	
Sant Gadge Baba Amravati University	

Technical Skills

Languages: Python, SQL

Frameworks: FastAPI, Flask, REST APIs

Databases: MySQL, PostgreSQL, ChromaDB, Redis

Big Data: Spark, PySpark, Hadoop, Hive, Kafka, Airflow

AI: RAG, Ollama (Llama 3), PaddleOCR, Vector Embeddings

Tools: Git, GitHub, Docker, Linux

Projects

PatentMind AI – Intelligent Patent Analysis and Prior-Art Search Platform

Python, FastAPI, ChromaDB, Redis, PaddleOCR, Ollama (Llama 3), RAG, Vector Embeddings

Architected an end-to-end RAG pipeline for semantic prior-art analysis. Built high-concurrency FastAPI endpoints for PDF optical character recognition (PaddleOCR), high-dimensional vector embeddings, and low-latency nearest-neighbor search in ChromaDB. Leveraged Redis in-memory caching to optimize query latency and deployed Ollama (Llama 3) for contextual inference.

SkyResolve – AI-Powered Cloud Incident Resolution Platform

Python, FastAPI, PostgreSQL, Kafka, Redis, Llama 3, RAG, Docker

Engineered an event-driven cloud telemetry and root-cause analysis (RCA) platform. Built asynchronous log-ingestion APIs in FastAPI and integrated Apache Kafka for real-time streaming. Developed a RAG framework leveraging Llama 3 to cross-reference historical incident vectors, persisting transactional metadata in PostgreSQL and containerizing services with Docker.

QR-Based Cafe Ordering and Billing System

Python, Flask, MySQL, REST APIs

Engineered a transactional restaurant POS backend using Flask and MySQL. Implemented RESTful APIs with ACID-compliant relational schemas for real-time state management, automated PDF invoice compilation, and optimized order queuing.
